

PROFESSIONAL SUMMARY

Detail-oriented Industrial Designer specializing in product development, high-precision CAD modeling, and Design for Manufacture and Assembly (DfMA). Combines first-class Honours-level architectural design research with practical factory floor prefabrication experience. Proven ability to evaluate component design limitations, resolve geometric tolerances, and coordinate cross-functional product development workflows. Driven to engineer practical, scalable, and sustainable circular-economy goods that optimize fabrication processes from initial concept to high-volume assembly.

RELEVANT DESIGN & ENGINEERING EXPERIENCE

Industrial Design Intern

Jun 2025 — Oct 2025

Wild Modular — Pyrmont, NSW

- Conducted on-site manufacturing plant audits of complex volumetric building components, gaining first-hand insight into commercial prefabrication workflows and Modern Methods of Construction (MMC) constraints.
- Produced production-ready CAD configurations and structural models in SolidWorks to support layout exploration and rapid physical prototyping pathways.
- Engineered and optimized bespoke physical components—including high-load fastener plates, joining brackets, and exterior cladding interfaces—adhering strictly to DfMA metrics and mass reduction goals.
- Executed systematic structural material evaluations and weathering parameter reviews to expand unit lifespan and durability index.
- Synthesized direct feedback from assembly lines and field technicians into technical assembly design alterations, fostering seamless cross-system integration.
- Compiled detailed engineering drawing packages, manufacturing tolerances, and high-fidelity product renders for internal design critiques and investor updates.

TECHNICAL RESEARCH & DESIGN ACCOMPLISHMENTS

The Proteus Adaptive System (Honours Thesis Project) | Western Sydney University

- Conceptualized and detailed a customizable, future-proof architectural boundary framing model tailored for National Construction Code (NCC) Class 1 regulations.
- Engineered a core structural matrix utilizing T-slot aluminum frame paths combined with independent fast-mount panel latches, enabling damage-free user configuration adjustments and integrated technical utility routing.

CORE SKILLS MATRIX

Technical Engineering: Design for Manufacture (DfMA), SolidWorks CAD, Parametric Part Design, Technical Drafting Standards, Geometric Tolerancing, Structural Joinery, Prototyping.

Strategic Design: User-Centered Design, Circular Economy Integration, Sustainable Lifecycle Planning, Mechanical System Layouts, Visual Ideation Sketching.

Logistics & Accounts:

Operational Fleet Transport, Contract Invoice Processing, Material Allocation, Field Client Management, Risk Mitigation Profiles.

EDUCATION

Bachelor of Industrial Design (Honours)

Western Sydney University — Parramatta City, NSW

Graduated Nov 2025

ADDITIONAL WORK HISTORY

Truck Driver — Kennards Hire

Traffic Controller — Safe Roads R Us

Mowing Business Owner — Blake's Mowing

Crew Member — McDonald's

Warehouse Assistant — Crosbe

Jun 2026 — Present

Nov 2025 — Jun 2026

Feb 2023 — Oct 2025

Nov 2022 — Feb 2023

Jun 2019 — Jun 2019
